SHORT TERM REHAB PROGRAMS

Cardiac

Our Cardiac Program is an interdisciplinary approach for the education, treatment and monitoring of residents with cardiac disease.

Sepsis

The PTS Sepsis Program is an interdisciplinary approach for the education, treatment and monitoring of residents with sepsis.

Heart Failure

The PTS Heart Failure Program is an interdisciplinary approach for the education, treatment and monitoring of residents with Heart Failure.

Chronic Obstructive Pulmonary Disease (COPD)

The PTS COPD Program is an interdisciplinary approach for the education, treatment and monitoring of residents with Chronic Obstructive Pulmonary Disease (COPD). Residents who have a COPD diagnosis or a related diagnosis such as Bronchitis or Emphysema would most benefit from this comprehensive program.

Pulmonary

Our Pulmonary Program is an interdisciplinary approach for the education, treatment and monitoring of residents with pulmonary disease.

Amputee

The purpose of our Amputee Program is to provide each candidate with individualized treatment, education and monitoring of each resident with an amputation and to foster return to highest level of function.

Wound Management

The purpose of our Wound Management Program is to provide individualized treatment, education and monitoring to residents with a Stage III or Stage IV non healing wound where treatment is not contraindicated.

COVID-19 Recovery

PTS Therapy interventions are requisite to mitigate further frailty, debility, risk of complication, and re-hospitalization. Rehab will determine the intensity level that will result in the most effective and efficient clinical outcome, taking into account patient tolerance and COVID-19 guidelines in facility. When multiple disciplines are vital, treatment frequency is spread the over 7 days; alternating disciplines on each day.

LONG TERM CARE PROGRAMS

Positioning Program

Our seating program provides an interdisciplinary approach for each residents unique needs. Treatment and education provide specific adaptations or custom seating to those residents determined appropriate.

Dementia

Our Dementia Program is an interdisciplinary approach for the education, treatment and monitoring of residents with dementia to ensure that all residents are functioning at their optimal physical and cognitive abilities.

Falls

Our Fall Program is an interdisciplinary approach for the education, treatment and monitoring of residents with increased risk for falls or with a history of falls.

Urinary Tract Infection

The PTS UTI Program is an interdisciplinary approach for the education, treatment and monitoring of residents with a Urinary Tract Infection (UTI).

Contracture Management

Our Contracture Management Program is an interdisciplinary approach for residents to achieve optimal range of motion and positioning in order to facilitate their highest level of function.

Parkinson's Disease

Our Parkinson's Disease Program is an interdisciplinary approach for the education, treatment and monitoring of residents with Parkinson's Disease (PD) or Parkinson's Plus Syndrome (PPS).

Rhythmic Auditory Stimulation

The purpose of our Rhythmic Auditory Stimulation Program is to optimize physical capabilities in residents through the use of auditory stimulation to facilitate motor movement, specifically targeting functional transfers and gait with the goal of reducing the need for chair and personal alarms ultimately reducing overall fall risk.

Activities of Daily Living (ADL)

The purpose of our ADL Program is ensure that all residents are performing their ADLs to their highest level of independence and that all caregivers for those residents are knowledgeable of the resident specific ADL program.
